

Global Edits:

- Make Top Header Menu Unsticky
- Remove Footer
- Remove Prices
- Student tab should only be visible to students
- Instructor tab should only be visible to instructors
- Remove Category and Status in the Courses menu

In Student, Remove:

- [Series](#)

- [Login](#)
[Sign Up](#)

- [Take Quiz](#)

- [Billing](#)

Start: have 2 options to login as (STUDENT) or (INSTRUCTOR) *buttons*

1st page is a login page/ sign up page.

- Remove Top Logo

- Make top header menu unsticky

3rd page would be for the students to see the courses that are for beginners, and it shows the instructors that are assigned to those courses.

- Change featured courses to enrolled courses
- Remove basics of social media
- Remove recent activity
- Remove upgrade button and “you have 5 days left”

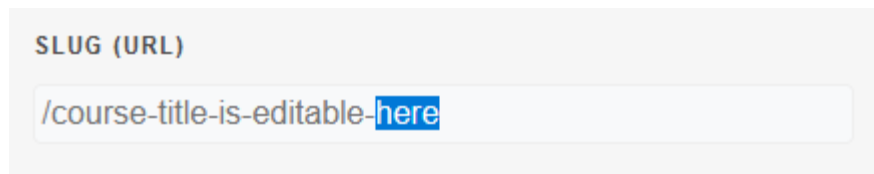

4th page would only be shown to instructors, they would be able to select courses they want to teach. This should be under the instructor tab.

☒ Yes

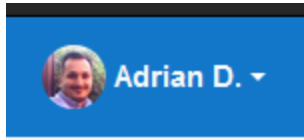

-The lesson should allow you to choose a course for it go under:

COURSE:

Basics of Angular

6th page is for students to upload their work. This needs to be under the Student tab and named "Upload work". This should upload to the server for teachers to mark

7th account page for teachers and students, where they can change their info and details. This can be under the account on the top right:

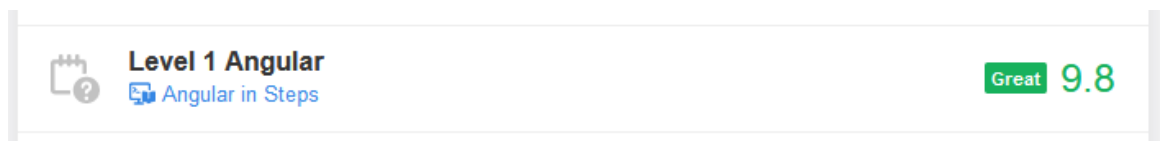

8th page is where teachers and students can drop or enrol classes.

For Students this should be under the Students tab and named "Courses"

- Should only show you level 1 courses, unless you have gotten over 7.0 on your course then it'll show you level 2. E.g

- Since they have gotten 9.8 they will be able to enrol in Level 2 Angular.

For Teachers this should be under the Teachers tab and named My courses

-Add an ability to make the course either level 1 , 2 or 3. This is to make it so students have to do them in order and have to get at least 7.0

9th page has contact info and an inquiry box.

Doesnt have to be anything special. Just an Email forum that will send their questions to us.

Would have to be HTML/CSS with Php/mysql, as Im gonna host it locally. I've attached my work scenario below for more information
